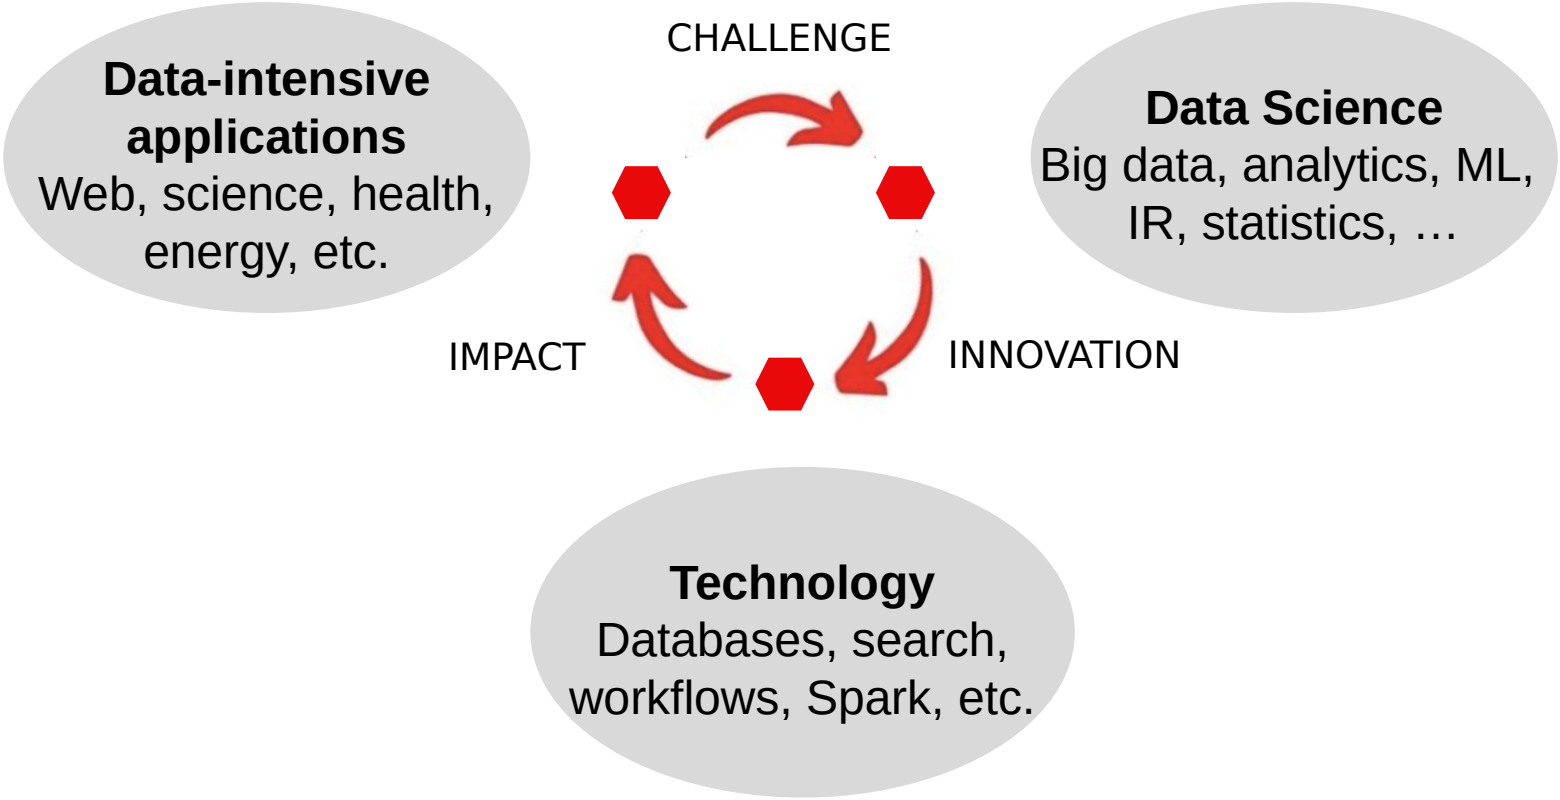
Data Science and Innovation

Patrick Valduriez

Data Science and Innovation virtuous circle



Outline

- Technological innovation
- Some success stories in data science
- Innovation at Inria-Brasil
- Conclusion

Technological Innovation

Innovation

- Introduces something new to the world
  - Economy: process, product, business model, …
  - Society: idea, belief, religion, political system, …
- May yield “progress”

Technological Innovation

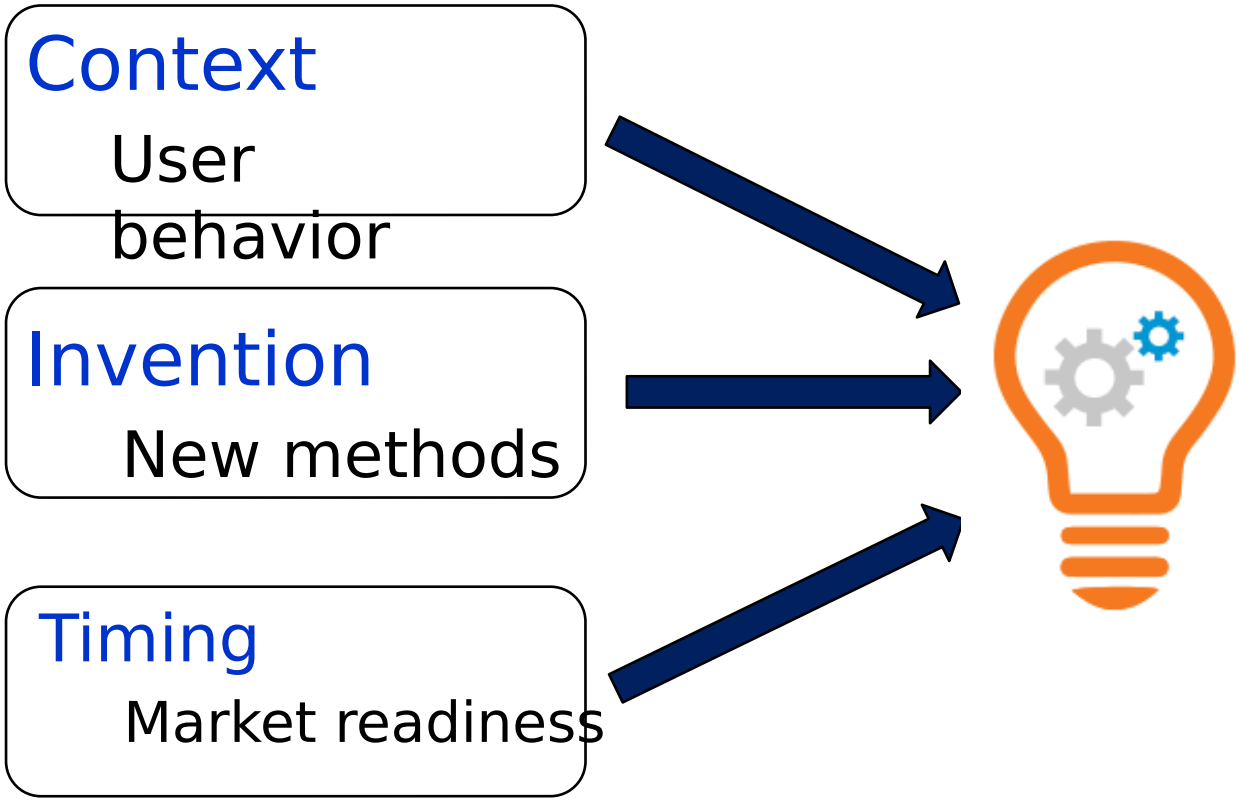
- New technology (as a result of research)
  - E.g. a new code library (implementing a new algorithm)
- Strategies to foster tech innovation
  - Within an organization, the market and customer base are well-know, hence, one can have a formal process, driven by *managers*
  - Within a startup, the context may be unknown or quickly changing, and hard to formalize (and manage), hence the need for *leaders*

Manager versus Leader

- Both should have common skills
  - Knowledge, experience, dynamism, charisma, communication, benevolence, organization, …
- Manager
  - In charge of implementing the company strategy
  - May lack technical skills
    - Makes communication with techies difficult
- Leader*
  - Able to create an inspiring vision, and guide and motivate a team towards a common goal
  - Strong technical skills
    - Helps getting respect from techies

*P. Valduriez. Making the Right Move to Senior Researcher ACM SIGMOD Record, 50(2), 2021

Technological Innovation Process



Invention versus Innovation

- An invention is a *new "thing"*
  - Method, process, machine
    - E.g. algebra, printing, smartphone
  - Can combine several inventions, e.g. the smartphone is a computer, a mobile phone, an appdev, etc.
- An innovation is an invention that causes change in user behavior or business
  - Hard: only a few inventions lead to innovation
  - Can be accidental
    - E.g. the pacemaker
  - Can take much time
    - E.g. the airplane

Invention and Innovation

- Documenting, protecting, and leveraging inventions is critical for innovation
- Two main solutions
  - Patents
  - Public licenses
- Choosing a solution should depend on the particular situation
  - But often is a polemical topic (proprietary versus open)

Patents

- Patents are evidence of inventions with
  - Legal protection of intellectual property
  - Documentation of the invention (unlike trade secret), so that others can improve on
- Some (heavily cited) patents yield innovations while many do not

Marquette Intellectual Property Law Review, 249, 2005

The Nose Pick Patent (2000)

US00D430934S

United States Patent [19]

Willard

[11] **Patent Number: Des. 430,934**

[45] **Date of Patent: ** Sep. 12, 2000**

[54] **NOSE PICK**

[76] Inventor: **Charles E. Willard**, 453 W. Mechanic St., Shelbyville, Ind. 46176

[**] Term: **14 Years**

[21] Appl. No.: **29/097,842**

[22] Filed: **Dec. 15, 1998**

[51] **LOC (7) Cl.** **24-02**

[52] **U.S. Cl.** **D24/147**; D11/157; D11/160; D24/133

[58] **Field of Search** D24/133, 146, D24/147, 155; 606/162, 161; D11/157, 160; D21/811, 812; D1/109; D32/40, 43, 46

[56] **References Cited**

U.S. PATENT DOCUMENTS

D. 260,866	9/1981	Richards	D11/160
D. 353,239	12/1994	Briscoe	D32/43
D. 360,720	7/1995	Drevo et al.	D32/4
D. 400,326	10/1998	Fisher	D32/4
5,895,408	4/1999	Pagan	606/16

Primary Examiner—Ian Simmons

Attorney, Agent, or Firm—Woodard, Emhardt, Naughton Moriarty & McNett

[57] **CLAIM**

The ornamental design for a nose pick, as shown and described.

DESCRIPTION

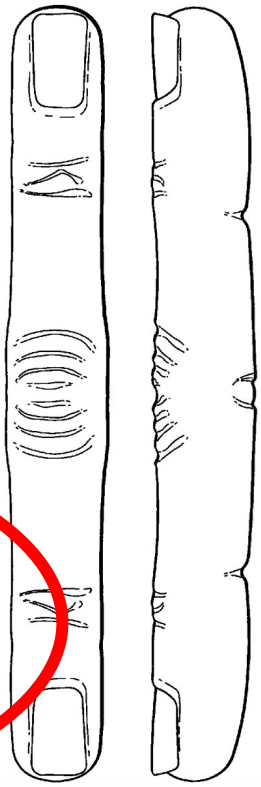
FIG. **1** is a plan view of a nose pick, showing my new design;

FIG. **2** is a side view thereof with the opposite side view being a mirror image thereof.

FIG. **3** is a bottom view thereof; and,

FIG. **4** is an end view with the opposite end view being a mirror image thereof.

1 Claim, 1 Drawing Sheet



The Magnetic Core Memory Patent (1956)

- U.S. Patent 2,736,880
  - Multicoordinate digital information storage device (coincident-core memory)
  - Jay Forrester (MIT): filed May 1951, issued Feb. 1956
  - 10 pages, highly technical
- Context: Whirlwind computer project at MIT in 1950
  - Required a fast memory for real-time aircraft tracking
  - MIT computer scientist Jay Forrester invents the coincident-core memory that enables the 3D storage of information
- Impact
  - 9 other patents from other inventors
  - Used by all mainframe computers from 1955 to 1975
    - Big $ in patent royalties for MIT

Critique of Patents

- By protecting inventors' rights, they encourage inventions, investment and ROI
- But they may hurt
  - Innovation
    - Patent term is often considered too long (e.g. 20 years) and may hurt competition (monopoly situation)
  - Collaboration with academia
    - (Most) academics suffer the Publish-or-Perish pressure
    - Patenting takes time and may conflict with the publication of research results (which must come next)

Public Licenses

- Protect and leverage artifacts
  - Artefacts: open source software, open source hardware, open data, …
  - The invention is described in research papers, white papers, …
  - The license specifies how the artifact can be used
  - Many different licenses with different constraints for the users
    - Copyleft (GPL, CeCILL, EUPL): viral
    - Weak copyleft (LGPL, Mozilla): for code libraries
    - Permissive (Apache, BSD, MIT)
- The basis for many successful projects
  - Linux, Apache, PostgreSQL, Spark, TensorFlow, Scikit-learn, …
- Strong impact in the cloud service-based business
  - Some $10+ billion acquisitions: Redhat-IBM, GitHub-Microsoft

Success Stories

ORACLE 2

- The beginning of relational databases
  - Invention of the relational model by E. F. Codd, 1970
  - Ingres project at UC Berkeley (1975-1980)
  - System R project at IBM Research (1975-1980)
    - Invention of the SQL language
- A few innovations in Oracle 2.0 (1980)
  - Implementation of the SQL language
    - With techniques published in others' research papers
  - Accidental incompatibility with IBM System R
    - Thanks to IBM that kept its error codes secret
  - Support of UNIX and other operating systems
- But many more later on
  - E.g. Oracle Parallel Server (Benoit Dageville et al)

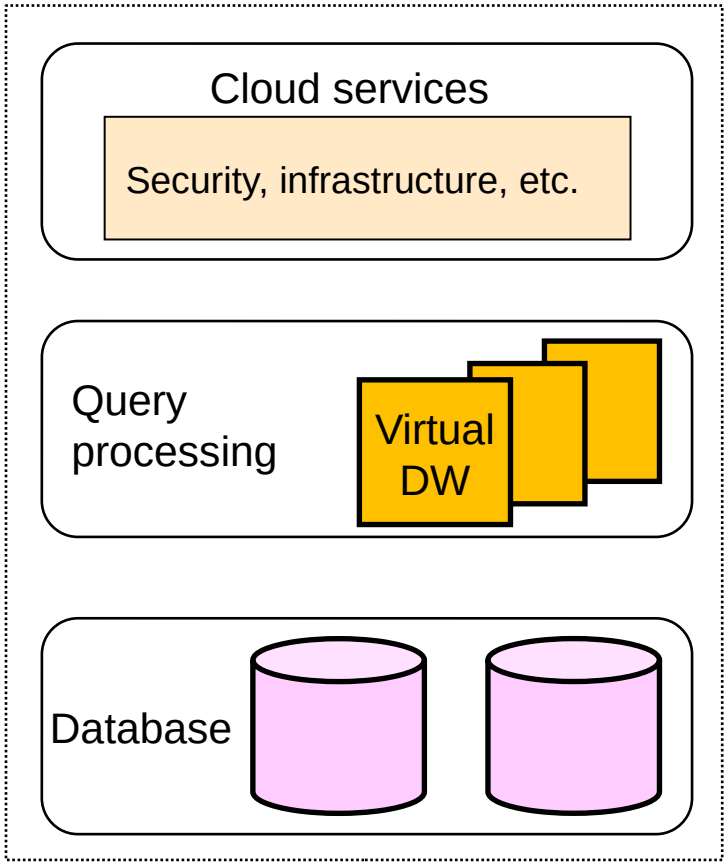
PostgreSQL

- The next generation of relational databases
  - Postgres (Post-Ingres) project at UCB (1985-1995)
    - The Postgres Next Generation Database Management System. Michael Stonebraker and Greg Kemnitz, Commun. ACM, 1991
- The first open source database
  - Abstract data types
    - Makes the DBMS extensible with user-defined code
  - Rule-based programming
    - Makes the DBMS intelligent
- Impact
  - 4th most popular (db-engines.com/en/ranking)
  - Many successful commercial variations
    - Aster Data, CitusDB, EnterpriseDB, Netezza, ParAccel, …

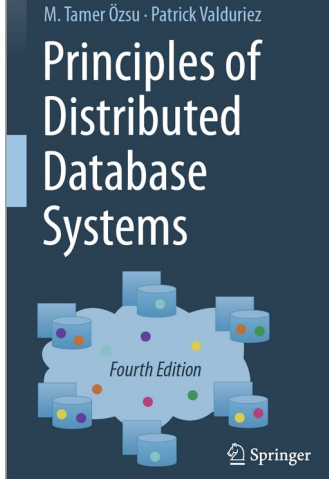
snowflake

Cloud data warehouse

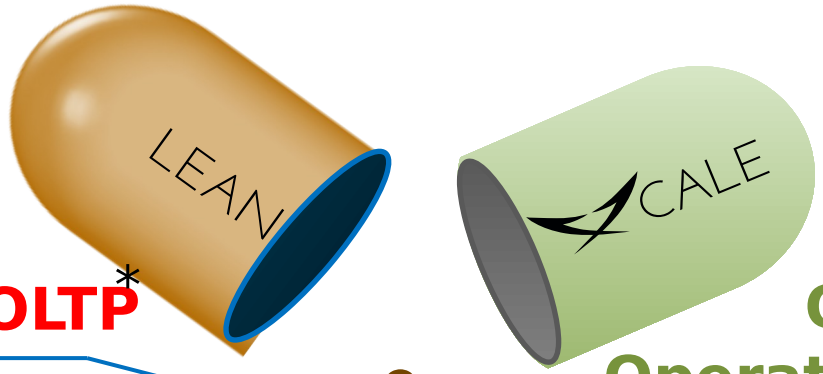
- Created in 2012
  - Founder: Benoit Dageville
  - 2020: largest IPO at Nasdaq ever ($3.4 billion)
- Cloud agnostic
  - AWS, Azure, Google, …
- Innovations
  - Ease of use
  - Independent levels of cloud services
  - Separate provisioning and invoicing



LEANXCALE



- Delivers a next generation NewSQL database
  - Created in Madrid in 2015 by R. Jimenez-Peris
  - Many innovations in distributed databases



Ultra-Scalable OLTP*

SQL Fully ACID DB

Polyglot

Queries across SQL, HBase, Neo4J, MongoDB, & Hadoop data lakes

Integration with Data Streaming

OLAP over Operational Data

Real-Time Big Data

Elastic & Ultra-Efficient*

Non-disruptive data migration, continuous l balancing and

*R. Jimenez-Peris, D. Burgos-Sancho, F. Ballesteros, Marta Patiño-Martinez, P. Valduriez.

Elastic Scalable Transaction Processing in LeanXcale. Information Systems

Innovation at

Inria Brasil

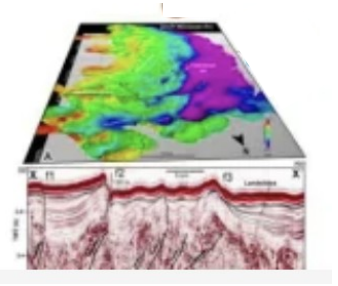
A PARTNERSHIP WITH LNCC AND BEYOND

Together, we do high-quality research
in HPC, AI, Scientific Computing and Data Science
to create innovative technology and address the challenge
of scientific and industrial applications

HPC4e

- BR-EU project 2015-2017
  - BR: ITA, LNCC, UFRGS, UFRJ, UFP, Petrobras, IBM Brazil
  - EU: BSC, Inria, Lancaster Univ, CIEMAT, Repsol, Total
- Objectives
  - Develop high performance simulation tools that can help the energy industry to respond to future demands and carbon-related environmental issues
  - Foster the cooperation between companies from Brazil and Europe
- Achievements
  - Strong scientific results in Exascale computing, geophysics and data science
  - Organization of international events
    - Int. Workshop: HPC and Data Science meet Scientific Computing, CARLA 2022 Conference, Porto Alegre, Brazil
  - Knowledge and technology transfer to industrial partners

Geophysics for Energy



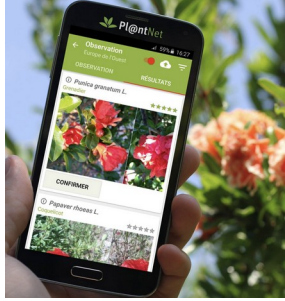
- Challenge
  - Improving the efficiency of geophysical exploration codes for different HPC architectures
- Results (Inria, ITA, UFRGS)
  - A set of synthetic models to test exascale solutions for geophysical imaging
  - Different high order methods and computational kernels compared to assess the feasibility of executing applications
    - M. Serpa, ... Ph. Navaux. Strategies to improve the performance of a geophysics model for different manycore systems. IEEE Int. Symp. on Computer Architecture and High-Performance Computing Workshops (SBAC-PADW), 2017
    - R. Lorenzoni, M. Serpa, E. Padoin, J. Panetta, Ph. Navaux, J-F. Méhaut. Otimizando o uso do Subsistema de Memória de GPUs para Aplicaçoes Baseadas em Estênceis. Workshop em Desempenho de Sistemas Computacionais e de Comunicação, SBC, 2017
- Impact
  - Petrobras, Repsol and Total have integrated the results of the project in their in-house codes

Provlake

- Computational Science & Engineering: challenge
  - Analyzing the data processed by workflows developed by multiple teams globally is critical for reproducibility, understanding and explaining
  - Hard to integrate heterogeneous data and workflows and make runtime data analysis efficient
- Results (Inria, UFRJ, IBM Brazil)
  - Provlake: a data management system capable of efficiently querying data across distributed services, databases and workflows by leveraging provenance data
    - Open source: https://github.com/IBM/multi-data-lineage-capture-py
    - Renan Souza, SBBD 2021 PhD award
    - R. Souza, P. Valduriez, M. Mattoso, et al. Efficient Runtime Capture of Multiworkflow Data Using Provenance. IEEE Int. Conf. on e-Science, 2019
    - R. Souza, P. Valduriez, Marta Mattoso et al. Workflow Provenance in the Lifecycle of Scientific Machine Learning. Concurrency and Computation: Practice and Experience, 34 (14), 2022
- Impact
  - ProvLake software used a lot by other teams*

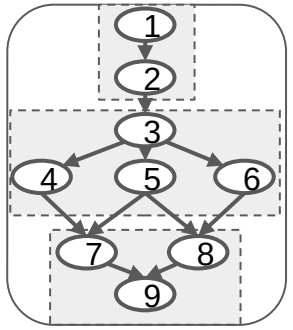
    *Management of Machine Learning Lifecycle Artifacts: A Survey. M. Schlegel, S. Kai-Uwe Sattler. ACM SIGMOD Record 51.4, 2023
  - https://ibm.biz/provlake: used by IBM for their clients

Pl@ntNet



- Citizen science project - Inria, CIRAD, INRAE, IRD, Telabotanica
  - Goal: help identifying plants and better understanding vegetal biodiversity using AI
  - The Pl@ntNet app (AppStore, Google Play) is used in 200+ countries (30M downloads) with 45K plant species
- Innovations
  - Intensive use of deep learning, content-based IR, parallelism, advanced databases, etc.
  - Innovation Prize 2021, Inria - Académie des Sciences
- Collaboration with LNCC
  - Optimization of Pl@ntNet's performance
    - D. Rosendo, A. Costan, G. Antoniu, M. Simonin, J-C. Lombardo, A. Joly, P. Valduriez. Reproducible Performance Optimization of Complex Applications on the Edge-to-Cloud Continuum, IEEE Cluster 2021
  - ML model selection with the Gypscie framework from LNCC
  - New project with CIRAD and USP to improve our knowledge of the Amazonia flora

Caching of Scientific Workflows



- Challenge
  - Improving the performance of scientific workflows in a multisite cloud
- Results (Inria, UFF, CIRAD, INRAE)
  - A distributed solution that leverages the heterogeneous resources available at multiple geo-distributed data centers through adaptive caching
    - DEXA 2020 best paper award by Gaetan Heidsieck, Daniel de Oliveira, Esther Pacitti, et al.
    - G. Heidsieck, D. de Oliveira, E. Pacitti, et al. Cache-aware scheduling of scientific workflows in a multisite cloud. FGCS Journal 2021
- Impact
  - The solution has been deployed in the OpenAlea workflow system used daily by CIRAD, INRAE, and their partners in the world for high-throughput plant phenotyping

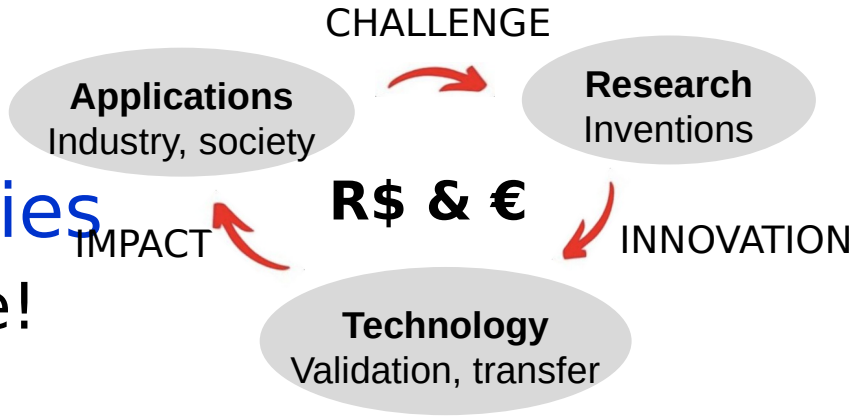
Conclusion

Inria Brasil

A PARTNERSHIP WITH LNCC AND BEYOND

in HPC, AI, Scientific Computing and Data Science

Inria-Brasil and Innovation



- We do have success stories
  - But there is room for more!
- Objectives
  - Keep doing high quality research in a very competitive environment
  - Create an eco-system that implements the innovation virtual circle with industrial partners
    - From Brazil and France
  - Get sustained support from Brazil, France and EU to fund projects and keep our top talents
